

Lexcan EPDM Membrane Features

Wider Sheets	Lexcan EPDM is available in sheets of up to 6.00m wide and 30m long. This dramatically reduces the amount of laps, the laying time and the cost of installation
High Strength	The Lexcan EPDM will not deteriorate in time and keeps its strength throughout its life. Lexcan EPDM has proven itself for over 40 years.
Superior Lap System	The Lexcan Lap system is up to three times stronger than other lap systems worldwide and has proven to last for the duration of the life of the membrane. The option of weldable laps is also available
Aesthetic Surface	The surface of the Lexcan EPDM has a uniform finish in texture and colour, creating an aesthetic finished waterproof roof. Reduction of unsightly laps also improves aesthetics
Enhanced Puncture Resistant	Lexcan EPDM is supplied slightly thicker than the standard 1.00mm, increasing puncture resistance
Extreme UV & Weather Resistance	EPDM rubber membranes have a much higher UV and weather resistance than many other membranes giving longer life and durability
Cost Effective	Due to larger sheets and ease of installation, the costs for installation are lower than other membranes available in Australasia
Long Lasting	Lexcan EPDM has been developed and tested to last for a minimum of forty years under standard conditions. A warranty period of twenty years is provided by the manufacturer
Colours Available Solar reflective	Lexcan EPDM is available ex stock, NZ, in black. White is available on indent. The lighter colours dramatically reduce heat build-up of the membrane, reducing excessive heat in the building and extending the life of the membrane and roof structure
